Software Engineering

Landscape depending parameter tuning for search-based software testing

Overview

1. Introduction
2. Fundamentals
3. Evaluation
4. APC-DynaMOSA
5. Evaluation
6. Conclusion

Introduction

- Unit tests
- maximize coverage (line, branch, exception)
- lack of sufficient tests
- costly and time-consuming
- => use search-based software testing

Motivation

- Tools... => EvoSuite state-of-the-art
- may not terminate => search budget
- optimal only with optimal configuration
- No Free Lunch theorem
  - impossible to find optimal configuration for all problems
- EvoSuite's default configuration is fairly good, but not perfect

Research goal

- wide variety of problem-cases
- concept landscape depending
- adaptive
- parameter control

Motivation

Heading

- Lorem ipsum dolor sit amet, consectetur adipiscing elit
  1. Aliquam blandit faucibus nisi, sit amet dapibus enim tempus eu
- Aliquam blandit faucibus nisi, sit amet dapibus enim tempus eu
- Nulla commodo, erat quis gravida posuere, elit lacus lobortis est, quis porttitor odio mauris at libero
